

GLOBAL SALES DATA ANALYSIS REPORT

GLOBAL SALES DATA ANALYSIS REPORT

1. Region with most revenue: **Europe**

- Total Revenue Amount: Approximately \$3,481,372,073 (**3.5Billion**)

2. The top five countries are:

- **Kiribati**
- **Qatar**
- **Grenada**
- **Taiwan**
- **Malawi**

The bottom five countries are:

- **Tajikistan**
- **Mali**
- **Malta**
- **Italy**
- **Cape Verde**

3. The Difference: There is a gap of approximately **\$3.15 Billion** between the highest and lowest regions.

4. The country that generated the most revenue between **2011 and 2015** is **Taiwan**, with **\$88,416,183**.

5. Top Country: **Taiwan** (with **380,647 units sold**).

- Their Most Ordered Item: **Beverages** (with **58,125 units**).

6. After filtering the global sales data for the 'Online' sales channel, **North America** was identified as the least profitable region. Within this region, **Canada** recorded the lowest profit margins (**\$8.58M**).

Hypothetical reasons for underperformance:

- **Geographic Logistics:** Canada's vast landmass increases 'last-mile' delivery costs, which significantly lowers the profit margin for online orders compared to more compact regions like Europe.
- **Market Maturity:** The North American e-commerce market is highly competitive. Established giants may dominate digital ad space, making it more expensive for the company to acquire online customers.
- **Consumer Preference:** There may be a regional preference in Canada for purchasing 'Household' or 'Office' items in physical stores (Offline) rather than through digital channels.

7. Taiwan: \$910,237.50 .

8. The Comparison:

- Winner: Snacks sold more units than Fruits.
- The Gap: Snacks outperformed Fruits by 242,834 units.
- Percentage: Snacks account for about 51.5% of the combined sales of these two categories, while Fruits account for 48.5%.

9. To increase patronage from the bottom five performers, I advise management to move away from a global strategy and toward a Regional-Specific Strategy. This includes focusing on high margin items like Household goods in European markets (Italy/Malta) and optimizing the supply chain in African markets (Mali/Cape Verde) to lower the cost-to-serve, thereby making low-volume orders more profitable.
